

# Meet the InSpace Advising Solution

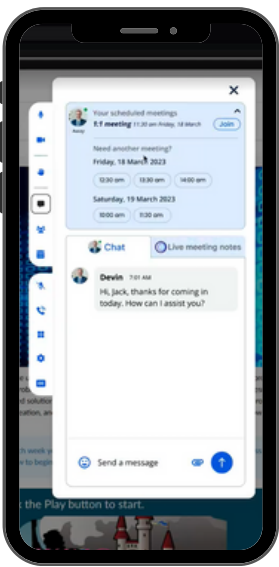

*Students want to make meaningful connections with their advisors, peers, and professors, but whether on-campus or online, it's not happening enough. InSpace's AI-Powered Platform strengthens student-advisor connections with personalized support on the platforms students already understand.*

## The Problem

One in ten students doesn't meet with their advisor during the academic year (Kuh, 2008). In the 2023 Student Voice survey, just 55 percent of respondents reported they received guidance on their degree progress from an academic advisor. The study revealed stark differences in experience along demographic lines, with historically marginalized students facing more barriers to meeting with advisors and receiving timely course advice. And lack of access to advising leads to increased time to degree completion.

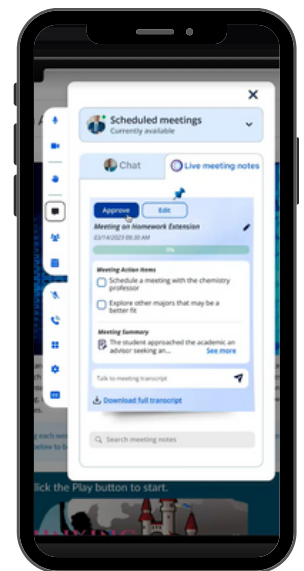

## The Solution

InSpace's AI-powered platform connects students and advisors for an equitable learning experience. With one click, students can see when advisors are available, make an appointment, add it to their calendar, and join a meeting—all in one beautiful, fun, and collaborative space.

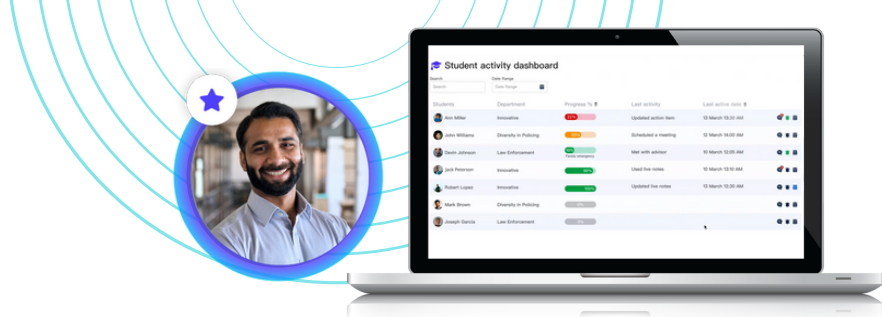

## The Benefits

- AI-powered features, including a virtual assistant that harnesses institutional knowledge to answer students' questions in real time.
- An innovative Live Notes tool seamlessly generates meeting notes, summaries, and action items, giving students a clear course of action.
- Notes are saved in a centralized, searchable archive, where students and staff can quickly reference previous conversations.
- Dashboards for professionals enable at-a-glance check-ins, nudges, and notifications so students don't fall through the cracks and advisors are always up to date on student progress.
- Proactive practices and holistic wraparound services help professional academic advisors navigate the student experience.

## The Results

- Students completing administrative tasks online face unfamiliar verbiage, numerous links, and limited ways to get real-time help. InSpace's immersive AI-powered video platform gives students more control over their online learning environment, empowering them to make meaningful connections with their peers, staff, and professors with the click of a button.
- According to the 2022 Wiley Voice of the Online Learner Report, "seventy-nine percent of survey respondents said they'd be willing to log in at a specific time at least once per course," even though the majority of students still prefer asynchronous (69 percent) learning programs. Now, you can harness students' new willingness to engage in relevant community activities that build social presence.
- One code on your platforms unites your campus tech stack for an equitable and accessible student experience. For the first time, student support services truly can reach "every single student enrolled at an institution" (White, 2015).

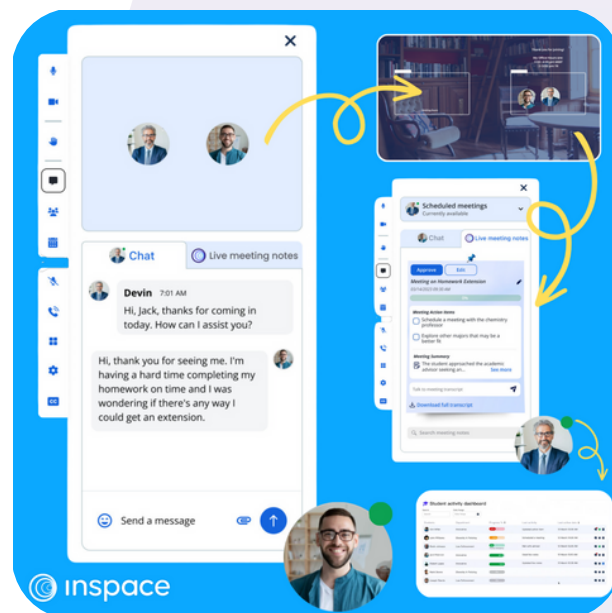

## The Impact

At InSpace, we're passionate about creating learning experiences that center the joy of the student journey and make learning a social experience.

Students thrive when they collaborate with others, including with their academic advisors, and take ownership of their experience at school.

With the launch of the campuswide InSpace advising experience, we're working to dismantle barriers to quality conversation and connection.

Together, we'll harness the power of technology to take the logistics out of the way for advisors, students, and administrators so they can focus on what they do best: learning, teaching, and building community.

**Community, collaboration, and relationship-building belong at the center of online learning. Let's reimagine the future of online education together.**
